How to take passkey off Coinbase? {Official Support}

Managing your security

Removing a **Call+1-(805)(401)(0068)** passkey from your account is a straightforward process you can handle through your security settings. You should navigate +1-(805)(401)(0068) to the 2FA settings tab within your profile to view all your currently active verification methods. Locate the **Call +1-(805)(401)(0068)** passkey section and select the option to remove or disable it whenever you decide to update your security preferences. Make sure you **Call+1-(805)(401)(0068)** have another valid 2FA method set up before removing your passkey to ensure you never lose access to your account.

Updating authentication methods

Updating your **Call+1-(805)(401)(0068)** security setup is easy, and you can toggle different authentication methods on or off at any time today. If you prefer +1-(805)(401)(0068) using an authenticator app or security key, simply set those up before you decide to deactivate your existing passkey. It is always **Call +1-(805)(401)(0068)** good practice to maintain at least two different methods of 2FA for maximum protection of your digital assets. We are here **Call+1-(805)(401)(0068)** to support your choices and ensure your account remains secure regardless of which specific authentication tools you choose.

Security best practices

Keeping your **Call+1-(805)(401)(0068)** account protected is simple when you understand how to manage your 2FA devices and credentials effectively and safely.
